The following <u>Listing of the Claims</u> will replace all prior versions and all prior listings of the claims in the present application:

Listing of The Claims:

Claims 1-23 (Cancelled).

24. (Previously presented) A method of screening a helminthic parasite preparation

for one or more components that reduce a Th1 immune response, said method comprising the

steps of:

(a) obtaining a helminthic parasite preparation;

(b) producing a homogenate of said helminthic parasite preparation;

(c) separating fractions of said homogenate;

(d) assaying a fraction of said homogenate to determine whether said fraction decreases a

Th1 immune response; wherein a decrease in a Th1 immune response is indicative of said

fraction comprising one or more components that reduce said Th1 immune response; and

(e) further fractionating said fraction of step (d) into sub-fractions and identifying a sub-

fraction that reduces a Th1 immune response.

25. (Cancelled)

26. (Previously presented) The method of claim 24 wherein a fraction containing one or

more components that reduce a Th1 immune response is further subjected to steps (c) and (d) one

or more times, to identify a sub-fraction containing one or more components that reduce a Th1

immune response.

27. (Cancelled)

28. (Original) The method of claim 24 wherein said helminthic parasite preparation is prepared from one of the group consisting of: helminthic parasite eggs; larvae; cercariae; and adult worms.

- 29. (Previously Presented) The method of claim 24 wherein fractionating is performed using one or more chromatographic separation techniques.
- 30. (Original) The method of claim 29 wherein said one or more chromatographic separation techniques are selected from the group consisting of: column chromatography; HPLC; FPLC; matrix-affinity chromatography; reverse-phase chromatography; and electrophoretic separation.
- 31. (Original) The method of claim 24 wherein said assaying comprises an in vitro assay.
- 32. (Currently Amended) The method of claim 24 wherein said assaying comprises administering a fraction from step (c) to a mammal and detecting a Th1 response in said mammal as evidenced by an in vitro assay.

Claims 33-35 (Cancelled).
